Assignment -2

Internet of Things

Assignment Date	27September 2022
Student Name	A.Arun Nava Meeena
Student Roll Number	912619104003
Maximum Marks	2 Marks

Question-1:

Build a python code, assume you get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Solution:

```
 import random
import time
while True:
 temperature = random.randint(-15,100)
 humidity = random.randint(1,100)
 print(f"Checking Temperature: {temperature}"u'\N{DEGREE SIGN}'"C");
 print(f"Checking Humidity: {humidity}%");
 f = (temperature * 1.8 ) +32
 print("Temperature in Fahreheit is:",f)

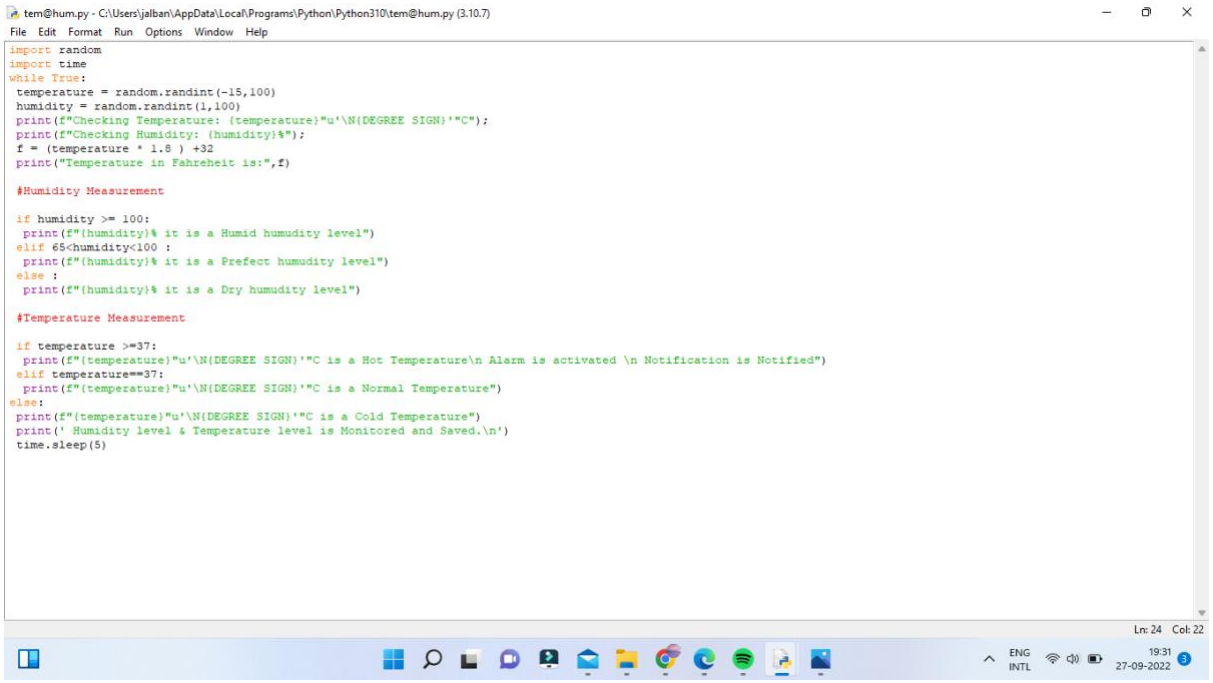
 #Humidity Measurement

 if humidity >= 100:
  print(f"{humidity}% it is a Humid humudity level")
 elif 65<humidity<100 :
  print(f"{humidity}% it is a Prefect humudity level")
 else :
  print(f"{humidity}% it is a Dry humudity level")

 #Temperature Measurement

 if temperature >=37:
  print(f"{temperature}"u'\N{DEGREE SIGN}'"C is a Hot Temperature\n Alarm is activated \n
Notification is Notified")
 elif temperature==37:
  print(f"{temperature}"u'\N{DEGREE SIGN}'"C is a Normal Temperature")
else:
 print(f"{temperature}"u'\N{DEGREE SIGN}'"C is a Cold Temperature")
 print(' Humidity level & Temperature level is Monitored and Saved.\n')
 time.sleep(5)
```

Output:



tem@hum.py - C:\Users\jalban\AppData\Local\Programs\Python\Python310\tem@hum.py (3.10.7)
